

May 2022

Danny,

On behalf of Corning and Display, we would like to congratulate you in honor of winning the “2022 Manufacturing Leadership Award” in the category of Artificial Intelligence and Machine Learning.

This award, selected by industry experts with extensive experience in Manufacturing 4.0, recognizes your innovative use of data and machine learning to achieve performance and process improvements through the new “Sheet Resume” analytics platform.

Your work pioneering the use of big data to improve Display finishing capabilities is an outstanding accomplishment in Display’s digital transformation journey.

Thanks to your dedication and ingenuity, we’ve achieved a step-change in our ability to precisely monitor and maintain glass quality throughout each step of the finishing process, allowing us to operate more efficiently while ensuring our customers get the pristine glass they demand.

These impactful results set the stage for future Manufacturing 4.0 successes across Taiwan, the Chinese mainland, and our entire Display fleet.

Thank you, and congratulations on this prestigious award!
